

README – locations

Here you can find location override databases to more than 400 maps. Just download the ones you need from the directory <http://antman.info/wolf/etpro/index.php?path=locations/> or download them all in a zip file: [all_locations.zip](#) and extract it to your etpro folder and you don't need to worry about anything else.

More information about using or creating the location override databases can be found on the [WolfWiki: Target location](#)
