

README – spawntimer script

Just extract the [spawntimer.zip](#) to your etpro folder and you don't need to worry about anything else. In case you already have a file called **autoexec.cfg**, take a backup of it before extracting the zip. You can also add the following line to your config file:

```
exec scripts/timer.cfg
```

How to use the spawntimer:

1. First you need to select the spawn interval of the opposing team. This can be done by pressing **NumPad PLUS**. This script supports 10, 15, 20, 25 and 30 second intervals.
2. Once you have selected the interval, simply punch in numbers on the **NumPad** to enter the spawntime.
3. ETPro has a built-in countdown timer, which typically displays next to your own spawn time, except in **red**. This script enables one-press utilization of this feature. To enable the timer, simply press **NumPad MINUS**.
4. To tell the spawn time to your team, press **NumPad ENTER** or when the enemy has spawned, press **NumPad DEL**.
